

Homework — Day 10: Practical Automation

- Task 1: Create a backup script that tars a target folder and keeps the last 7 backups (rotate).
- Task 2: Create a log-rotation script that compresses logs older than 14 days.
- Task 3: Add a dry-run option to both scripts (do not perform changes when --dry-run given).
- Deliverable: scripts with usage examples and a crontab line example.
